

ELP-3360PF

HIGH VOLTAGE HIGH POWER DC LOADS

POSITIVE PROBLEM SOLVING **+ =**

This series of high power loads are able to take up to 14.4kW at 500Vdc. A high degree of accuracy is provided via the front panel displays and the integrated computer interfaces.

Models are available with relatively wide or narrow current sink ranges. All units have dual ranges for both current and resistance operation. This provides excellent resolution with the possibility of setting steps below 2mA. True dynamic operation is possible when the load is in constant current or constant power mode. The current slew rate can be adjusted between 2 preset current levels.

- + Dynamic Operation with External Tracking**
- + Full Range of Computer Interfaces**
- + Front Panel Memory Function**
- + CC, CV, CP & CR Modes**
- + Ideal for PFC Testing**

ELP-3360PF

HIGH VOLTAGE HIGH POWER DC LOADS

FURTHER DETAILS

The time while the waveform is at the upper limit and the time spent low can also be adjusted. The load also has an input to enable it to follow a signal generated from an external source.

The front panel memory is a useful feature to enable frequently used setting to be quickly restored. A dedicated short test function enables the short voltage and current to be measured.

The ELP-3360PF is used in many applications including PFC & current limit testing, transient response and battery charge/discharge simulation.
